

Akupor-H economic wall absorbers

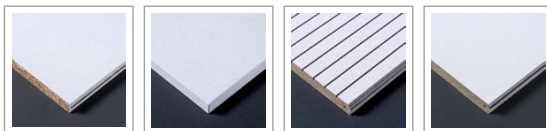

- Acoustic wall linings
- Acoustic patches
- Ball impact resistant ceiling, wall covering, flexible wall systems

Akupor-H: large wood chip-acoustic panels with the visible surface covered with acoustic fleece and oversprayed with BER structure varnish or BER acoustic lacquer (plain, without structural texture), fire rating class B 1, sound absorbing (sound absorber classes C and D) or sound reflecting, white and all RAL and NCS colours are available, fire rating class B 2, sound absorbing (sound absorber classes C and D) or sound reflecting.

Akupor-H panels provide an inexpensive solution in sound absorber classes C and D. Visually and acoustically Akupor-H panels are a good choice and can be used with all BER installation systems in standard or purpose-made sizes. Akupor H acoustic wall panels will reduce, flutter echoes and provide a good level of sound absorption.

Panel substrates with the same surface design, but other characteristics

Sonoplus, wood flake acoustic panel

Metal-V, Metal acoustic panel

Solith, acoustic panel (grooved) made from biosoluble mineral wool

Solith, acoustic panel made from biosoluble mineral wool
